

# INSTALLATION: RAILINGS

## WITH VISTAFOLIA®

Cable ties may be used in place of Vistafolia® fixings when installing panels onto metal fences or railings. The number of cable ties needed will depend on the location and type of railing. Heavy duty, UV-stable cable ties are recommended.

### EXAMPLE

CABLE TIES  
PER PANEL: 8

### INSTALL SURFACE

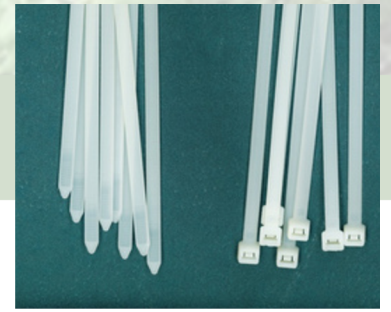

Metal mesh panels

Note! This install method is used for chain link fencing.

## TECHNICAL RECOMMENDATIONS FOR USING CABLE TIES TO ATTACH THE PANELS

1. Use black heavy duty UV resistant cable ties.
2. Ensure the cable ties can hold at least 100lbs of weight per cable tie.
3. 8" cable ties are not recommended they won't give adequate length or support per panel.
4. Use 9 heavy duty ties per panel (with allocating 3 rows of 3 cable ties) spaced out as you see fit, for adequate support to hold and secure the panels.
5. You can shop around to find the best package size/rate as theres so many options to choose from at retail stores:
